

Setup

Print the Materials (single-sided)

- **Instructions (pages 3-5):** Students will be working in groups of 2-3. There are three different stations, so you will need to have enough sets of instructions at each station to cover your class that will be divided amongst the stations.

For example, if you have 20 students, you would have 10 pairs. Three pairs could be at Station A, three pairs at Station B, and four pairs at Station C. You would print out four copies of the instructions to cover all of the students.

- **Post-it Sticky Notes:** Each student will use 2 sticky notes at each station. Ensure there are enough sticky notes at each station for all students. It will be helpful to have two different color sticky notes at each station for the two questions.
- **Activity Guides:** Each student will use their activity guide to record their choices from each station and take notes on any takeaways.

Note: If you have access to multicolored paper, you may want to print each part on a different color to be posted around the room. This will help students move from one station to another because they will be able to look for unique paper colors rather than walking up to the station to determine whether they have already completed it.

Place Students in Groups of 2-3

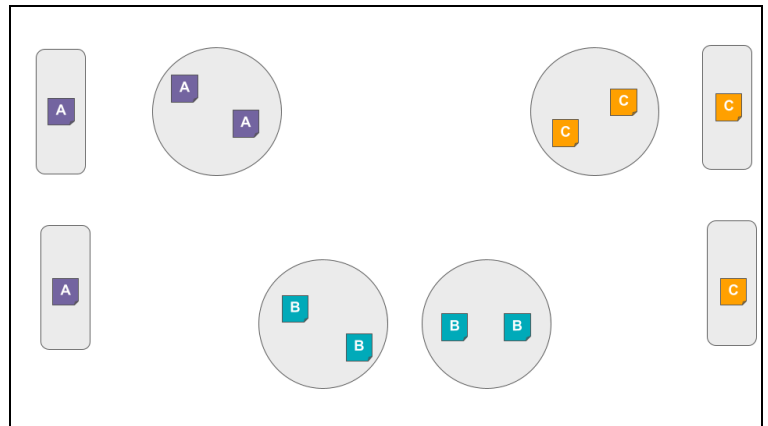

Place your students in groups of 2-3 so they always have someone with whom to discuss their thoughts.

Distribute post-its to each pair, or have post-its available at each station. Remind students that they do not need to complete the stations in order.

Post the Instructions

Post the instructions around the classroom, making sure to space them far enough apart so that students have space to write their responses on post-its. Based on your room configuration, you may want to try one of the following options:

- Place the parts around the room, taping questions to walls, doors, cabinets, whiteboards, or shelves.
- Create pods of desks/tables in your classroom, and post one part at each pod.
- Spread out by posting parts in the hallway outside of your classroom.

Create and Post the Station Posters

Create and post the station posters in a part of the wall that is “central” to each station. Students should be able to read the instructions, write their responses on a post-it, and then attach their post-its to the station poster.

Station A Poster Setup

Station A Poster		
Who should own AI-generated content?		
... The AI Creator	... The User	
The Company	... Shared Ownership	
What happens if AI uses copyrighted material in training?		
...	...	...

Station B Poster Setup

Station B Poster

Should AI-generated art be considered “**real art**”?

←

...

Real

...

...

...

Not Real

→

Who should get credit—the AI, the programmer, or the person providing the prompt?

...

...

...

...

Station C Poster Setup

Station C Poster

Should musicians have **control** over AI trained on their music?

Yes	No
... ...	

Who should be compensated when AI-generated music is sold?

...

...

...

...

STATION A

Consider the following:

In 2023, controversy arose when AI-generated books—created using tools like ChatGPT—were listed on Amazon under fake author names and marketed as legitimate works.

Who should **own** AI-generated content?

The AI Creator	The User
The Company	Shared Ownership

Do This:

1. Determine who you think should have ownership.
2. Write your reasons on your first sticky note.
3. Place your sticky note in your chosen quadrant on the **Station A Poster** in the area you determined in step 1.
4. Add your thoughts to the additional question below on a second sticky
 - ***What happens if AI uses copyrighted material in training?***
5. Place your second sticky on the **Station A Poster**
6. *If time allows, discuss your sticky notes with those at your station*

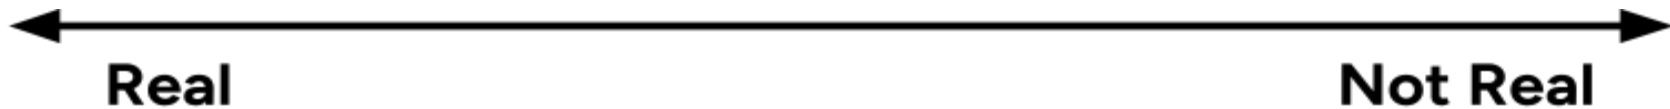

STATION B

Consider the following real-world debate:

Debates over "real art" raged in 2022 after an AI-generated artwork titled "Théâtre D'opéra Spatial", created using MidJourney, won first place at the Colorado State Fair's digital art competition.

Should AI-generated art be considered "**real art**"?

Do This:

1. Determine if you think art generated by AI should be considered "real art" or not.
2. Write your reasons on your first sticky note.
3. Place your sticky note in your chosen box on the **Station B Poster** in the area you determined in step 1.
4. Add your thoughts to the additional question below on a second sticky
 - ***Who should get credit—the AI, the programmer, or the person providing the prompt?***
5. Place your second sticky on the **Station B Poster**
6. *If time allows, discuss your sticky notes with those at your station*

STATION C

Consider the following:

In 2023, major music companies filed lawsuits against AI music platforms Suno AI and Udio AI, accusing them of using copyrighted songs without permission. These tools generate new music from user prompts, raising serious questions about ownership, consent, and compensation.

Should musicians have **control** over AI trained on their music?

Yes	No

Do This:

1. Determine if you think musicians should have control over AI trained on their music.
2. Write your reasons on your first sticky note.
3. Place your sticky note in your chosen box on the **Station C Poster** in the area you determined in step 1.
4. Add your thoughts to the additional question below on a second sticky
 - ***Who should be compensated when AI-generated music is sold?***
5. Place your second sticky on the **Station C Poster**
6. *If time allows, discuss your sticky notes with those at your station*
