Activity Guide - AI in the Community

Part 1: Summarizing Key Findings

Choose a topic of interest regarding the use of AI in the community. Use the provided chatbot levels to help summarize the different articles that are available in order to evaluate this implementation of AI. Experiment with different combinations of articles for different insights!

Who in the community benefits most from this AI? How do they benefit?

Who in the community is most harmed from the use of this AI? How are they harmed?

Are there any negative effects or unintended consequences, such as environmental impact?

Problem Solving with AI

Part 2: Brainstorm A Change

Now that you've explored how AI is used in your community, take a moment to reflect on your own ideas.

What is one change or improvement that could make AI more fair, more effective, or less harmful? This could be something small or big — what matters is that it responds to what you learned.

Example: AI systems that track your data should give you a clear way to opt out of data collection

Part 3: Share What You Discovered!

Now that you've learned about how AI impacts your community, it's time to share with others what you've discovered.

Step 1: Choose Your Audience

Who would be a meaningful or impactful group to hear your idea? **Circle one:**

- | | |
|---|---|
| • A friend or family member | • The school newspaper or broadcast team |
| • A younger student (e.g., incoming 9th grader) | • A professional in a field you care about |
| • A school administrator, teacher or coach | • An online audience (e.g., TikTok, YouTube, podcast listeners) |
| • A local business or organization | • Other: _____ |
| • A school club or team | |

Step 2: Create Your Elevator Pitch

Imagine you're in an elevator with someone from the audience you just chose – you only have about 30 seconds to get your message across before they step out. What could you say that would make them care about the AI issue you've been learning about?

Use the elevator pitch guide on the next page to help organize your pitch.

Tip: You can use the AI Chat on Level 4 as either your pilot to get started or your co-pilot to help you revise any parts of your elevator pitch!

Hook: Start with a bold statement, surprising fact, or quick attention-grabber.

Example: Did you know students spend over 1,000 hours a year in school buildings, but most don't feel heard in how things are run?

Introduce yourself and your idea: Let them know who you are and what issue you're talking about.

Example: I'm Jordan, and I'm working to help students have more say in school decisions.

Explain the purpose: What change or improvement do you want to see?

Example: We noticed the student council doesn't always reach all voices, so we're designing a feedback app anyone can use.

Why it matters: Why is this important to your school, community, or future?

Example: If more students feel heard, it builds a stronger, more respectful school community.

Call to action: What do you want your listener to do or think about next?

Example: I'd love your thoughts — or if you know someone who can help us test the prototype, let me know!
