

Slide	Notes
C O D E Lesson 13: AI Time Capsule Project (Day 1) Problem Solving with AI	
Warm Up	Warm Up (5 mins)
Problem Solving with AI AI Time Capsule Project – Warm Up Do This: Which headlines feel possible? Which feel exaggerated? How do current trends shape what we believe about the future? AI-Generated Films Outsell Traditional Hollywood Productions First AI CEO Appointed to Lead Fortune 500 Company AI Will Soon Take Your Order at Taco Bell and Pizza Hut	Future Headlines ■ ■ Do This: Place students into groups of two or three. Display the mix of real (“AI Will Soon Take Your Order at Taco Bell and Pizza Hut”) and AI-generated future news headlines and have students analyze the headlines. ■ Discuss: Click through the animated slide to display the prompts. Which headlines feel possible? Which feel exaggerated? How do current trends shape what we believe about the future? ■ Discussion Goal: Students should recognize that AI-generated predictions can be plausible but also exaggerated or biased based on the data AI has been trained on. The goal is for students to start questioning AI-generated content and assessing its realism. Teaching Tip If students struggle, prompt them to consider what evidence would be needed to make a prediction believable. ■ ■ Say: Now that we’ve examined some AI-generated headlines, let’s shift our focus to see how we’re going to create our own predictions with AI’s help.
Activity	Activity (30 mins)

AI Time Capsule Project

You should have:

- AI Time Capsule Project Planning Guide
- pen or pencil

Project Overview (10 mins)

■ **Goal of this activity:** Introduce students to the AI Time Capsule project, its goals, and expected deliverables.

■ **Distribute:** Give each student a copy of the AI Time Capsule Project Planning Guide.

Do This: Explain that in this project, students will be working with AI to explore possible futures. Introduce the project and explain the project structure: Students will create a future prediction using AI. They will refine it through AI and peer feedback. They will present their final work in a creative format.

✓ Do This:

Read the **rubric** found on the **last two pages** of the project planning guide.

Domain	Competency	Knowledge	Skills	Attitudes
Mathematical proficiency	Understand mathematical concepts and procedures Reason and solve problems Communicate mathematical ideas Connections Representation	Number and operations Algebra Geometry Measurement Statistics and probability	Problem solving Communication Connections Representation	Positive attitude towards mathematics Confidence in mathematics Curiosity Perseverance
Personal, Social and Communication Competencies	Self-awareness Self-management Social awareness Relationship skills Responsible decision-making	Personal and social development Communication Problem solving Decision making	Problem solving Communication Relationship skills Responsible decision-making	Positive attitude towards learning Confidence in learning Curiosity Perseverance
Science & Global Competencies	Understanding of science and technology Understanding of the world Understanding of the environment Understanding of the global community	Science Technology Environment Global community	Problem solving Communication Relationship skills Responsible decision-making	Positive attitude towards learning Confidence in learning Curiosity Perseverance
Arts and Creative Competencies	Understanding of the arts Understanding of the creative process Understanding of the creative industry	Arts Creative process Creative industry	Problem solving Communication Relationship skills Responsible decision-making	Positive attitude towards learning Confidence in learning Curiosity Perseverance
Personal and Learning Competencies	Understanding of the self Understanding of the learning process Understanding of the learning environment	Personal Learning process Learning environment	Problem solving Communication Relationship skills Responsible decision-making	Positive attitude towards learning Confidence in learning Curiosity Perseverance

Do This: Instruct students to review the assessment criteria rubric and final deliverables on the last pages of the Project Planning Guide. Explain the design challenge framing of "How can we use AI as a creative partner to generate meaningful future predictions?"

Teaching Tip

Encourage students to think about how AI can be a useful tool for prediction, but not an absolute truth-teller.

 Discuss:

- What do you **notice** about the project **requirements** and **rubric**?
- What does **success** look like for this project?

■ **Discuss:** Click through the animated slide to display the prompts.
What do you notice about the project rubric?
What does success look like for this project?

■ **Discussion Goal:** Students share what they notice about the project requirements and rubric and identify the tasks they will need to complete for this project.

 Discuss:

What **barriers** do you anticipate to achieving success on this project?

■ Discuss: What barriers do you anticipate to achieving success on this project?

■ **Discussion Goal:** Students identify barriers they anticipate and share any questions they have about the project.

✅ AI Time Capsule Project: Day 1

- Choose a focus area and gather artifacts.
- Predicting the future:
 - Make an initial prediction about the future.
 - Use AI to generate a prediction, then refine its prediction.
- Exchange feedback with a peer.
- Choose your audience and creative format for your final product.

■■ Do This: Click through the animated slide to introduce the steps students will take on Day 1.

✅ AI Time Capsule Project: Day 2

- Analyze AI's prediction for accuracy and bias.
- Develop and refine your final product with the help of AI.
- Get peer feedback on your product.

■ ■ Do This: Click through the animated slide to introduce the steps students will take on Day 2.

✅ AI Time Capsule Project: Day 3

- Finalize your product.
- Present your prediction in a Gallery Walk.
- Discuss and respond to feedback from your peers.
- Complete the End of Project Reflection.

■ ■ Do This: Click through the animated slide to introduce the steps students will take on Day 3.

✓ Do This:

- Choose a **focus area** for your AI Time Capsule Project.
- **Record it** in your Planning Guide.

Step 1: Identifying our Propositions

Choose a Focus Area

1. Write One or two of the areas to be studied/proposed.

• Learning	• Spells
• Character	• Relationships
• Interests	• Other

Teacher's Note: The narrower and **specific** students' interests are described, both their descriptions and the images, they will be able to focus more on.

My Initial Proposition

2. Write One or two of the subjects/propositions collected, so far, as your own knowledge and experience make an initial proposition choose the focus of your chosen area and record it below.

My proposition is: _____

My question is: _____

As a Proposition

3. Write One or two of the 'Lower' level words with the **Chosen** to be used as a future proposition for the **Chosen** area you are working through in the topic of the scenario write your subject.

My Proposition: _____

1. **How** did you choose to challenge your initial proposition?
2. **How** did you change your challenge to your proposition or how did it adjust?
3. **How** did you change your challenge to your proposition or how did it adjust?

4. Document your Proposition produced with an 'Inquiry' statement. (e.g., 'I believe that in 2021 people will not parent' will be because...)

Exploring Future Possibilities with AI (20 mins)

■ **Goal of this activity:** Guide students through AI-assisted future predictions, evaluating and refining outputs.

■ Say: Now that you understand the project's structure, let's begin shaping your predictions. We're going to start by gathering information, making an initial prediction, and then seeing how AI builds on it. Your job is to refine AI's ideas into something you truly believe could happen.

■ Do This: Instruct students to select a focus area for their project and record it in Step 1 of their Project Planning Guide.

Gathering Artifacts

- Search for images and documents.
- Download the artifacts you plan to use and save them to a folder.

Note: Don't spend too long looking for the perfect artifact - focus on finding a few strong resources to give AI enough context.

■ Goal of this activity: Gather enough artifacts to give AI enough context to make a prediction.

■ Do This: Emphasize to students that they should find several resources but that they don't need to look for the "perfect" artifact. Instead, their focus should be on only spending a few minutes gathering resources so they can move on to the next steps.

■ **Circulate:** Support students who might be spending a long time searching by asking "What kind of information do you think AI will need?" or "Do you already have a Few artifacts that feel useful?"

Teaching Tip

Make a plan beforehand for how you want students to store artifacts. In order to upload them to AI Chat, students need to save the files to their computers. You might consider leading a mini-lesson for students on how to create a folder on their computer's desktop where they can store images and PDFs.

✓ Do This:

Complete **My Initial Prediction** by making a future prediction using the artifacts you collected for context.

Day 7: Handling on Predictions

Classroom Practice Ideas

Do This: Create one of the pieces in the problem situation and

- **Write** – Write
- **Draw** – Draw
- **Illustrate** – Illustrate
- **Diagram** – Diagram
- **Sketch** – Sketch
- **Other** – Other

Teacher Goals

• **Write:** Assess the student on **quality** and **quantity** of evidence to document, both text documents and drawings.

My Individual Prediction

Do This: Send one of the problems on your clipboard, as well as a piece of your own knowledge and evidence to support your prediction about the future of your chosen object and send it home with the student to be turned in or posted in the classroom.

At Predictions

Do This: Have students use a “what if” and a “what is” to form a future prediction for their chosen object. Have them write or draw their prediction and then share with the class.

Key Information

• **Do not** use any of the things you already know about your prediction!

• **How did you organize your prediction to include as much evidence as you could? Do you all predict?**

• **Document your student prediction with an “I believe... statement.” Give a picture that is [of] yours. (Do not use any of the things you already know.)**

Do This: Direct students to complete the My Initial Prediction section of their planning guide. They should make a prediction using the artifacts they gathered for context.

✓ AI Time Capsule: Day 1

Lesson 13

1 ○ ○

Do This:

1. Use AI Chat to make a prediction.
2. Evaluate AI's response for accuracy and bias.
3. Refine your initial prompt.
4. Repeat this process.

■ Transition: Direct students to Lesson 13, Level 1 to work with AI Chat to generate on a future prediction for their chosen area.

■ Circulate: Ensure students are working through the steps in the level to refine their output. Have students working at the same pace answer the discussion questions in Step 2 together.

Teaching Tip

Check if students are evaluating AI's predictions critically or just accepting them.

If students accept AI's outputs without questioning, ask:

"What trends or real-world examples support this prediction?"

"Who might benefit or be excluded from this future?"

Encourage students to refine AI's predictions by comparing the predictions to their own knowledge and research.

Wrap Up

● ● ●

Wrap Up (10 mins)

✓ Do This:

Complete **Day 1 Reflection** by answering the self-reflection questions.

Then make a final prediction statement using the stem "I believe . . ."

■■ Do This: Direct students to answer the self reflection questions in Day 1 Reflection in their Project Planning Guide. Then have students make a final prediction statement using the sentence starter "I believe . . .".

Teaching Tip

Optionally, you can have students record their answers to these questions on a 3x5 card to be handed in as an Exit Ticket as they leave the class.

C O
D E

Lesson 13: AI Time Capsule Project (Day 2)

Problem Solving with AI

Warm Up (10 mins)

Warm Up

● ○ ○

The Future of Work Predictions

By 2050, AI will completely replace human doctors, making hospitals fully automated.

AI's prediction

Diagnostics will improve disease detection, but human doctors will still be needed for treatment and ethical decision-making.

AI + human refinement

What exactly did the human change or add?

Human in the Loop (5 mins)

■ Goal of this activity: Help students recognize how human reasoning improves AI-generated content. They will apply these skills as create a presentation that documents their own process of working with AI.

■ Discuss: What exactly did the human change or add?

■ Discussion Goal: Students identify the specific changes the human made to the AI's prediction, such as clarifying limits of automation and including a more realistic role for humans. This will help them later in the lesson explain their own changes to the AI outputs they received.

■■ Say: Just like in this example, your job today is to explain the refinements you made while working with AI.

Activity

Activity (35 mins)

✓ AI Time Capsule Project: Day 2

- Decide on a presentation format.
- Develop and refine your final product with the help of AI.
- Get peer feedback on your product.

■■ Do This: Review the tasks for Day 2 of the project and explain that today, students' goal is to begin developing their final product.

Teaching Tip

Decide in advance what platforms students will have available for their final product and where they will save their work. If you plan to have students create a slides presentation, infographic, news article, etc. you may want to create a shared class folder where all students can save their products.

Selecting Your Presentation Format

- Go to Day 2: Presentation of Process in your Project Planning Guide.
- Consider which format would best showcase your process of creating your prediction. Examples include:
 - Infographic
 - Slides presentation
 - Podcast
 - Poster

■ Goal of this activity: Guide students in selecting their final presentation format.

■■ Say: Before we start developing our final product, let's decide how you want to present your prediction. Think about what format will best communicate your ideas.

■■ Do This: Instruct students to pick a product format for their project.

✓ Do This:

Start brainstorming your final presentation.

Complete **Develop Your Presentation** by jotting down notes or ideas.

The screenshot shows a form titled 'Develop Your Presentation' with the following fields:

- Presentation Format:** A dropdown menu with 'Infographic' selected.
- Presentation Topic:** A text box containing 'The Future of Work Predictions'.
- Presentation Content:** A large text box for notes or ideas.

A blue arrow points to the 'Presentation Format' dropdown menu.

■■ Do This: Direct students to complete the Develop Your Presentation section in their Project Planning Guide.

Collaborating with AI

Make sure your presentation includes:

- Your initial prediction
- AI's initial prediction
- Any inaccuracies or bias in the AI output
- How you changed your prompt to improve AI's prediction
- Your final prediction
- What you learned about AI through the process

■ Do This: Review the checklist with students to ensure they understand what they need to include in their project. Do this before they move on to Lesson 13, Level 2 and begin collaborating with AI. Students can also find this list in the Collaborating with AI section of their Project Planning Guide.

AI Time Capsule: Day 2

Lesson 13

Do This:

- Generate ideas, supporting text, dialogue, or other elements for your chosen format.
- Improve the content, structure, or tone of your final product.
- Make your presentation clearer and more engaging.

■ Transition: Direct students to Lesson 13, Level 2 to use AI as a collaborator to help them refine and improve the content or design of their presentation.

■ Circulate: Ensure students are updating their presentations with the collaboration of AI Chat.

Teaching Tip

As students are creating their project's product, look for if students are integrating AI-generated insights while maintaining their own voice. If students over-rely on AI's wording, ask:

"How can you make this sound more like your perspective?"

"What details could you add to make this clearer for your audience?"

Guide students to refine AI's content rather than copying it directly.

Do This:

Exchange project presentations with a peer and complete the Peer Review section of the Project Planning Guide.

Note: You are not expected to be finished with your presentation. Use this as an opportunity to get feedback on what you have so far.

■ Do This: Direct students to exchange projects with a peer and complete Peer Review. Students will use the peer feedback to make revisions to their final product.

Teaching Tip

If time allows, you can have students go through one more round of iteration on their project's product after getting peer feedback.

Wrap Up (5 mins)

Wrap Up

Do This:

Complete **Day 2 Reflection** by answering the self-reflection questions.

Wrap Up (5 mins)

■ Do This: Instruct students that before they move on to finalizing their projects next class, to take a moment to reflect on today's refinements. Direct students to answer Day 2 Reflection questions in their Project Planning Guides.

Teaching Tip

If time allows, have students share their reflections with a partner or in small groups.

Lesson 13: AI Time Capsule Project (Day 3)

Problem Solving with AI

Warm Up (10 mins)

Warm Up

Problem Solving with AI AI Time Capsule Project – Warm Up

Discuss:

How can you tell if something was written by a person or by AI?
Why does that matter in your project?

AI or Human Generated Content? (10 mins)

■ Goal of this activity: Encourage students to reflect on the importance of making their own voice, decisions, and reasoning clear in their presentation, rather than simply repeating AI-generated content.

■ Discuss: How can you tell if something was written by a person or by AI? Why does that matter in your project?

■ Discussion Goal: Students should recognize the value of personal input in AI-generated content and identify what makes a presentation feel original, human, and thoughtful. They should begin thinking about how to show ownership over their choices and reasoning.

Activity (30 mins)

Activity

Problem Solving with AI AI Time Capsule Project – Activity

Do This:

Make any final revisions based on the peer feedback you received and the reflections you wrote down from the previous class.

Finalizing the AI Time Capsule (15 mins)

■■ Do This: Give students about 15 minutes to make any final revisions for their project.

Project Presentations

In small groups, take turns presenting. Answer the following questions as well as any additional questions posed by your peers:

- What perspectives are represented in this prediction?
- What biases might have shaped this future scenario?
- How does this prediction encourage responsible AI use?

Presenting Your Prediction and Peer Feedback (15 mins)

■ ■ Do This: Have students form groups of three or four students. Direct students to present their projects and engage in peer discussion. Make sure each presenter is answering the following questions as well as any questions their peers have for them:

What perspectives are represented in this prediction?

What biases might have shaped this future scenario?

How does this prediction encourage responsible AI use?

Teaching Tip

Depending on class size, consider using stations, sticky notes for written feedback, or rotating peer groups to keep discussions efficient.

Look for if students are engaging critically with each other's predictions. If discussions lack depth, ask:

"What makes this prediction compelling or questionable?"

"What evidence supports or challenges this scenario?"

Push students to ask thoughtful questions and challenge assumptions.

Wrap Up

Wrap Up (5 mins)

End of Project Reflection

Complete the End of Project reflection in your Project Planning Guide.

End of Project Reflection (5 mins)

■ ■ Do This: Have students think about AI's role in shaping the future and how we ensure AI is used responsibly. Have students complete the End of Project Reflection in their Project Planning Guide.

Teaching Tip

If time allows, have students share their reflections with the class.
