

Careful Prompting

AI responses improve with specific and well-structured prompts. The more details included, the less likely AI is to make assumptions or hallucinate.

Okay Prompt:

"What's the driving age here?"

Better Prompt:

"At what age can drivers get their learner's permit in the state of New Jersey?"

Be Skeptical of AI Responses

AI can confidently provide incorrect information. Be cautious, especially with proper nouns, numbers, links, and quotes.

Scenario:

A student asks AI: _"What is the tallest mountain in the world?"_

AI responds: _"Mount Kilimanjaro, at 8,848 meters, is the tallest mountain."_

Reality Check:

Mount Everest is the tallest mountain, not Kilimanjaro!

Fact-Check with Search Engines

AI doesn't verify facts before responding. Always search for key claims using trusted sources.

Scenario:

A user asks AI: _"What is the penalty for jaywalking in Los Angeles?"_

AI responds: _"In Los Angeles, the penalty for jaywalking is a \$500 fine and three points on your license."_

Fact-Check:

Searching official city websites reveals that jaywalking fines are typically much lower and don't impact licenses.
