

Activity Guide - Collaborate on a Product Launch

In this activity, you'll take on a creative role to help launch a new school-focused product or app. You'll work as part of a team—just like in a real creative agency—and use AI to co-create content that supports your group's product launch.

AI is your creative partner – it can help you research, brainstorm, generate, and refine ideas. But you are the one driving the process. You'll decide what to ask, what to keep, what to change, and how to make the final content your own.

Your Task:

1. Join your team and choose one product to launch.
2. Pick your creative role.
3. Collaborate with AI to complete your role in four stages.
4. Record your process in this activity guide.

Group Project Choice

What product or app did your group choose for the launch? Examples: Jetpack Backpack, Smart Lunchbox, NoteSync App, Virtual Locker.

Group Role Assignment

What role are you completing for the product launch? (Text: Name + Slogan, Visual: Logo Description + Branding, Video: Commercial Script, Audio (Text): Song/Jingle)

Break Down Your Role

List out the smaller tasks that make up your job. Each task should describe a specific action you do. *Example: Team Captain → Tasks: send reminders, plan practice, motivate teammates, set goals*

1.	4.
2.	5.
3.	6.

Sort and Compare

Decide which category each task from above belongs in. Think about who (or what) would do it best: AI, humans, or both working together. Then compare your choices with a partner. Talk about where you agreed or disagreed and why.

Best for Humans	Best for AI	Best for Collaboration

AI Chat Prompting Stages

At each stage, write down your ideas and ideas the AI suggested.

Stage 1: Market Research

How did you use AI for market research? What did you ask AI to research?

AI Response

Stage 2: Brainstorming Initial Ideas

What ideas did you generate with AI? What did you ask AI to help with?

AI Response

Stage 3: Generating Content

What content did you generate with AI for the product launch (e.g., slogans, commercial script, logo description)? What prompt did you give AI?

AI Response

Stage 4: Refining and Editing

How did you refine or edit AI-generated content? What did you ask AI to improve?

AI Response

Reflection on AI Collaboration

What stage of the project did you find AI to be most helpful in?

What would you have lost if you relied solely on AI?

Final Step: Your Launch Piece

Use everything you created to finish your part of the product launch.

This is your mini-project – make it polished, creative, and clear!

- Finalize your slogan, logo description, script, or jingle (based on your role).
- Make sure it reflects both your ideas and the best parts of the AI suggestions.

You'll share your piece with your team and maybe even pitch it to the class!
